REFERENCE

We are QNA Technology, a Wrocław-based technology company whose mission is to implement nanomaterials in the industry in order to develop innovative solutions. Our flagship product is colloidal synthesis of semiconductor quantum dots that emit blue light. The activities of QNA Technology have been awarded with many prestigious recognitions, e.g. The main prize in the Production Process category in the Egale of Innovation competition organized by Rzeczpospolita, or the 1st place in the NEW INDUSTRY category at the European Start-up Days 2019.

The key issue when looking for an accounting office was for us to find a business partner who would be characterized not only by extensive knowledge and professionalism, but also by a friendly approach to the client. The nature of our activity is related to projects, which makes it extremely important for us to keep meticulous settlements related to them. JWW can also be counted on to keep the timeliness of submitted declarations. Clear messages received from the entire team allow us to save time and focus on our tasks.

We recommend JWW to those who want to ensure the comfort of running a business!
