REFERENCE

As Red Embedded Consulting - we have been developing our knowledge for over 20 years, providing software, hardware and backend development in the cloud. Our end-to-end services include consulting, technical strategy, solution architecture, product design and development, integration, compliance and testing. We work with the biggest players on the market and carry out the idea from concept to complete product development - in short, we make their products "smart" and turn their ambitions into reality. We have branches in Great Britain, Poland, US and India.

We have been associated with JWW Accounting Office continuously since 2015. Due to the expansion of business in Poland, we were looking for a reliable partner who knows the market well and will indicate the most optimal solutions. We wanted an accounting office that, like us, would be able to approach its client's matters in an individual way. As financial security is a very important issue for us, we wanted to be sure that the person in charge of our accounting matters would be able to report all our financial flows accurately.

The support we have been receiving since 2015 is a constant confirmation of the professionalism and commitment of the entire JWW's team.

We definitely recommend JWW Accounting Office as a business partner!

Magdalena Pomiankiewicz
Senior Office Manager
